

# Idea 1: Sharable Grocery List

## First to be done

Household account to share grocery list between users

share grocery list between users  
List view + sidebar with list of users (currently active and inactive) in the account

Private website with password for member to access it

Categories for items by store isles

Default and custom categories

Adding directly to categories

Priority items

## Next stage

Manual input of total cost of the groceries purchased

Points getting the groceries (by number of items bought) to help even the efforts between users

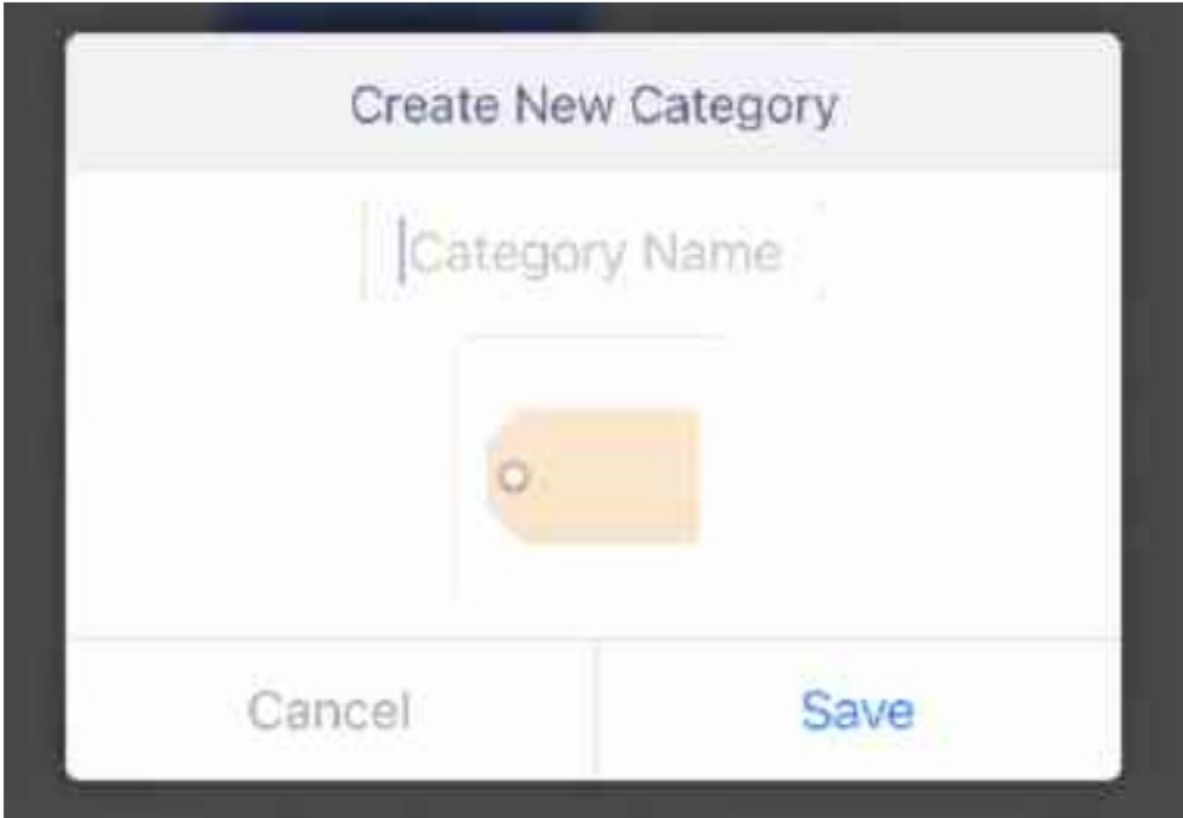

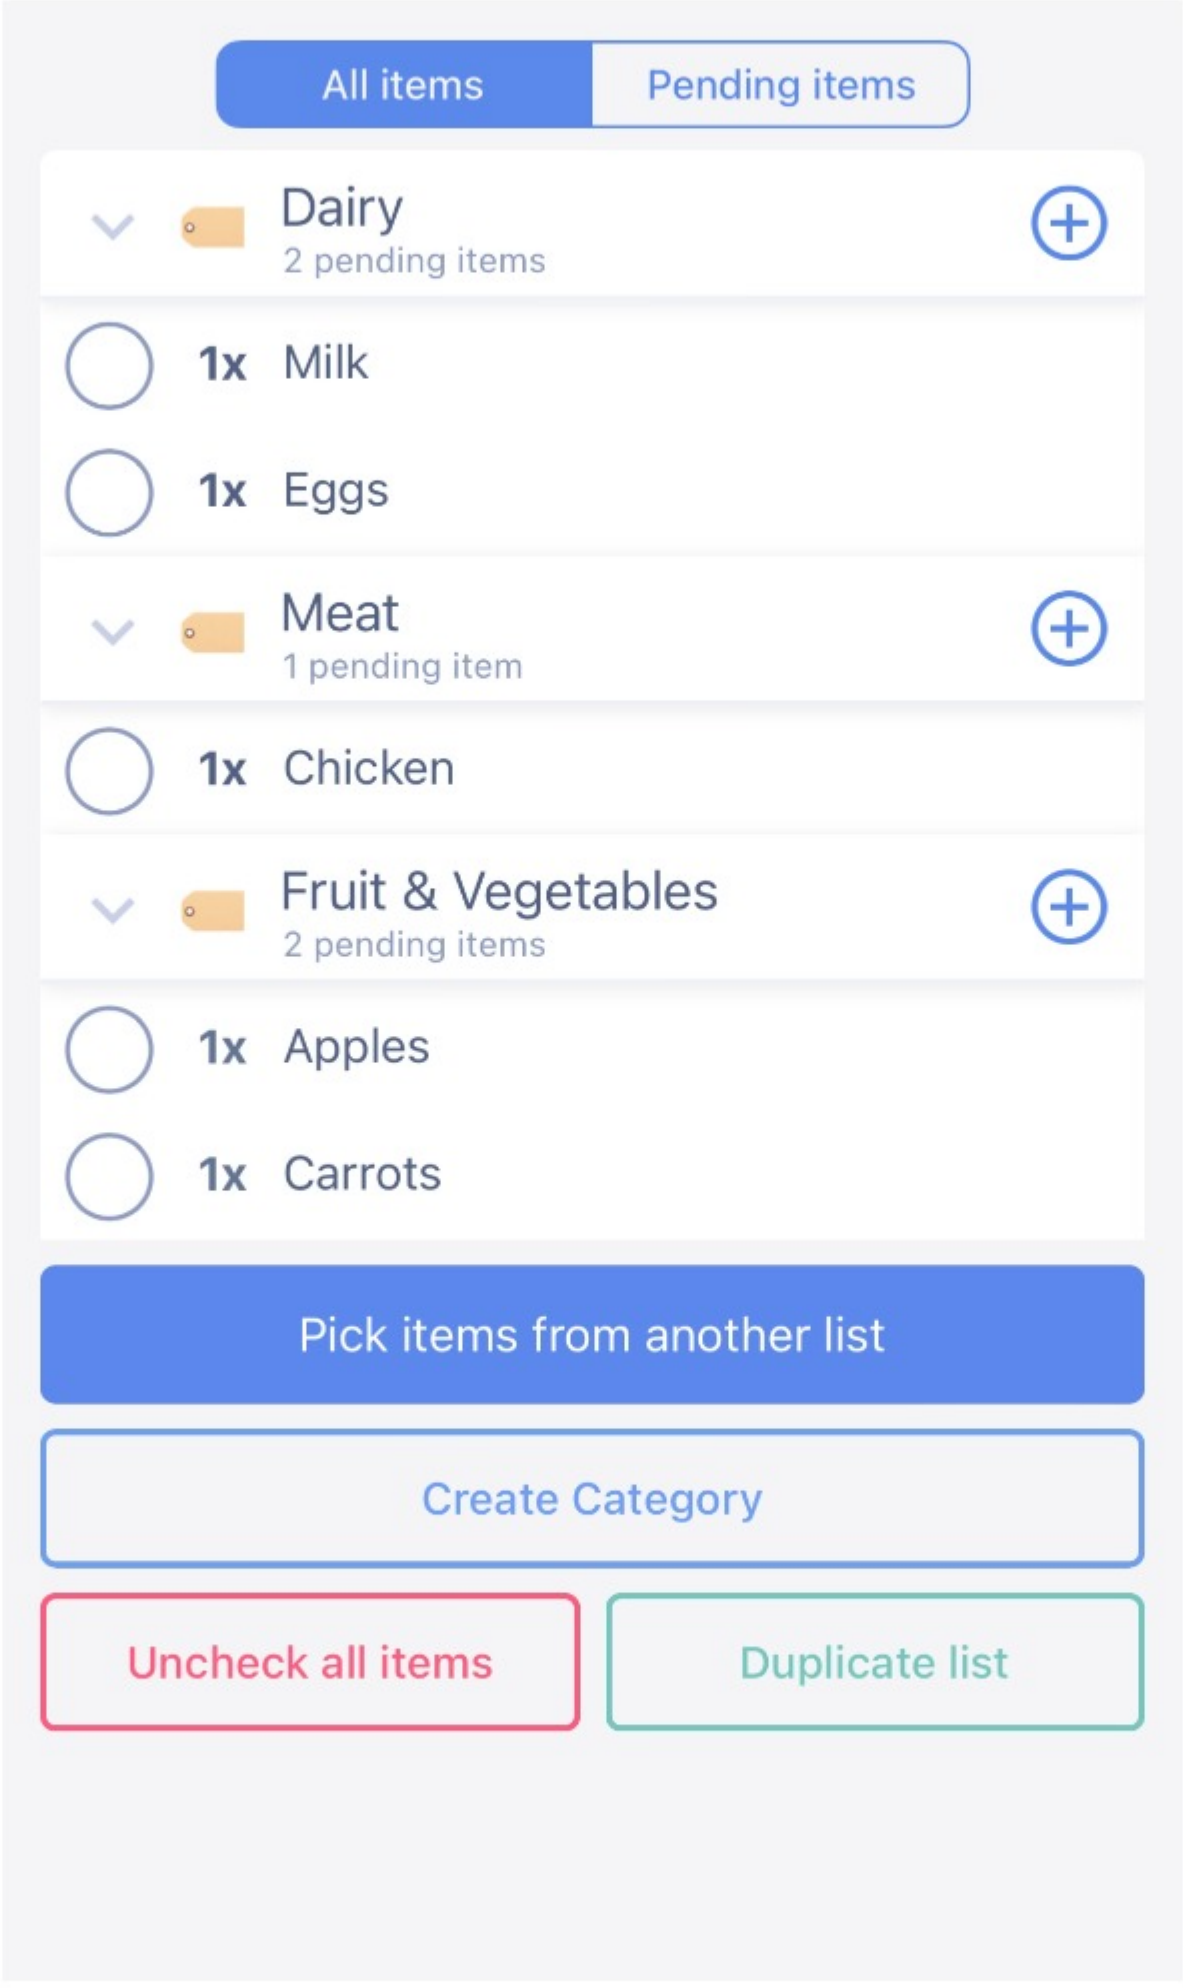

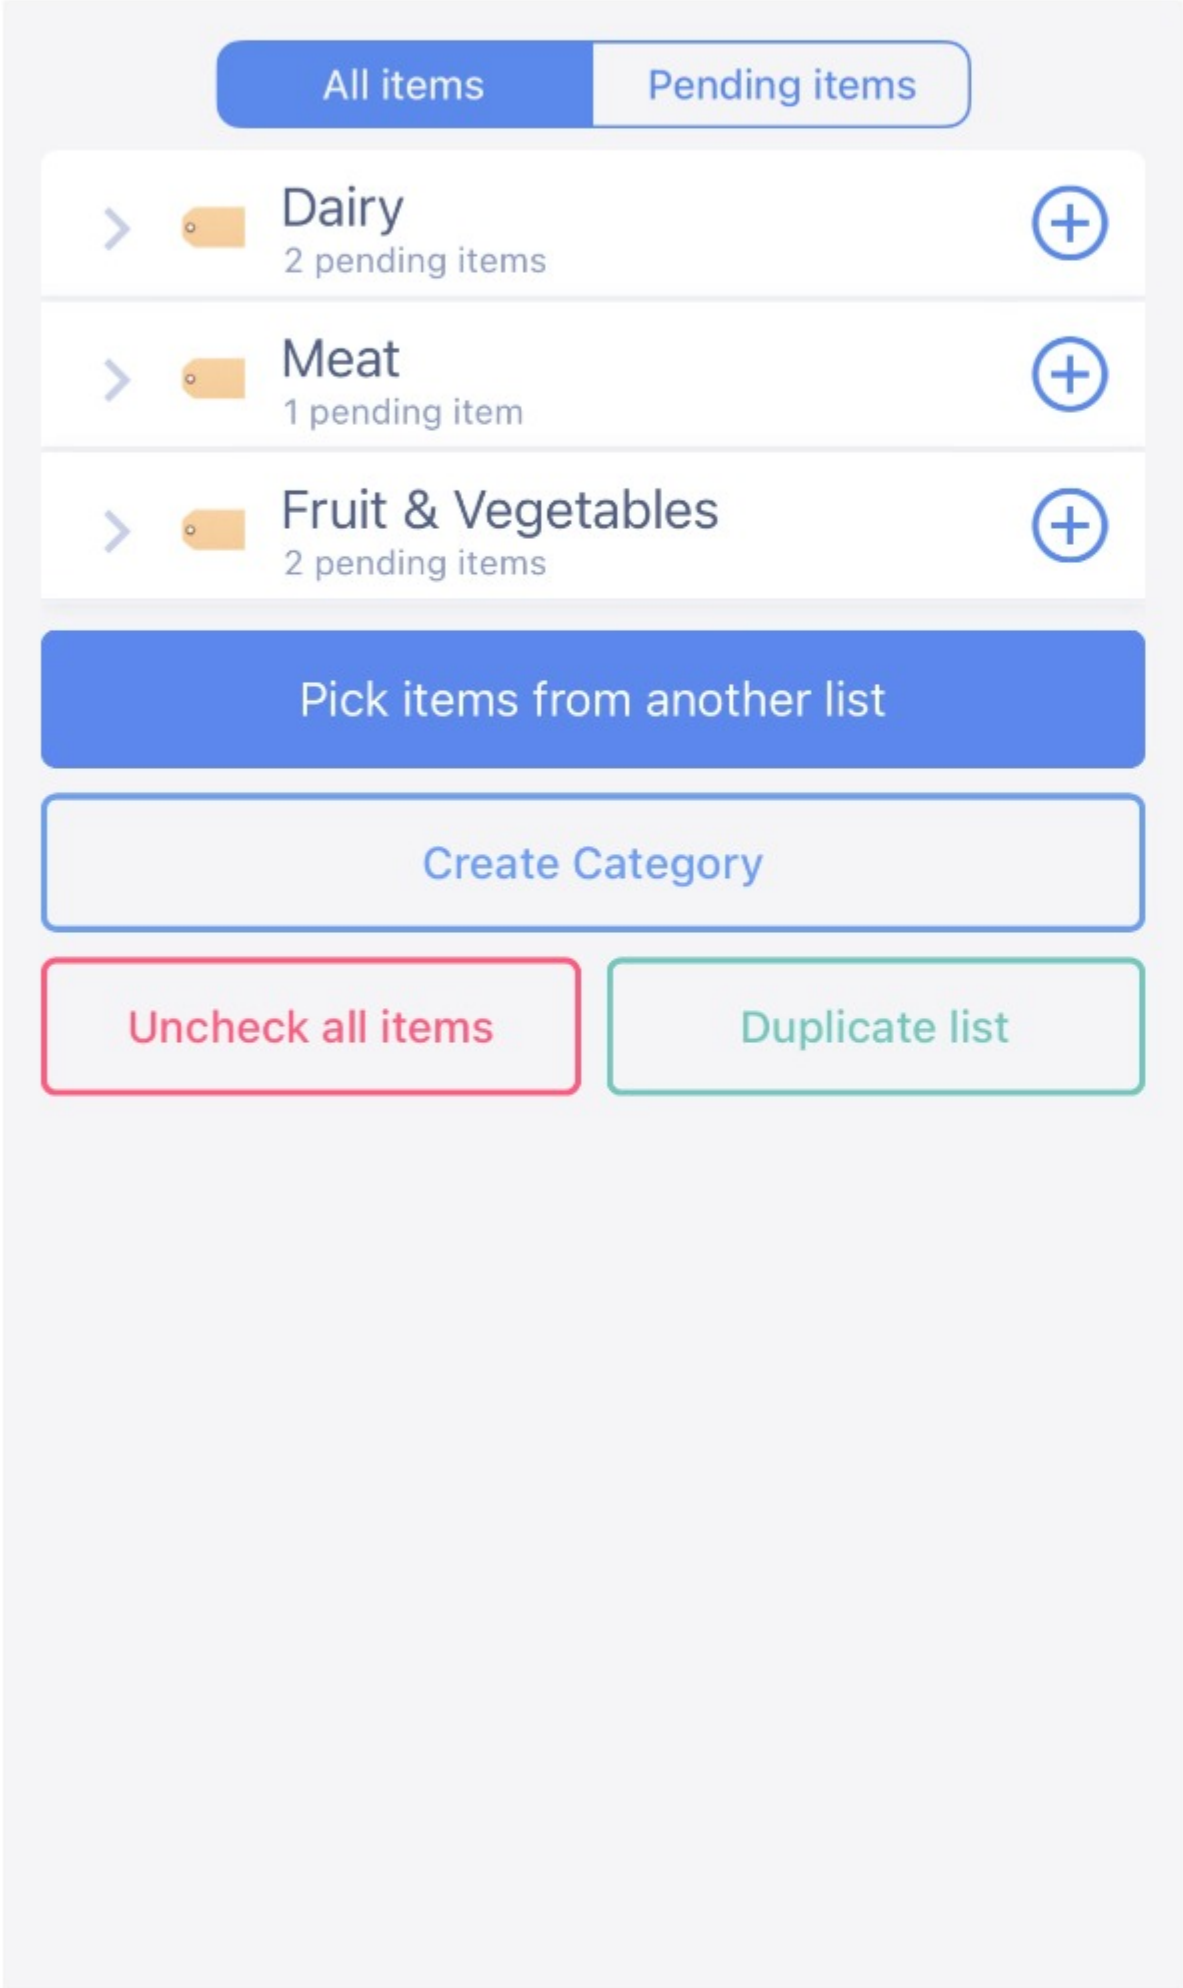

Possibility to adjust cost split by different fractions (not necessarily 50/50)

## Maybe last

Email notifications about changes made and what items have been added or checked off

# Example Application

# Website Design Sketch
